<sup>1/</sup>Estimates of the Crop Reporting Board.

<sup>2/</sup>Commercial stocks reported by Grain Branch, P.M.A., at 44 terminal cities.

<sup>3/</sup>Owned by CCC and stored in bins or other storages owned or controlled by CCC; also CCC-owned grain in transit to ports and stored in Canadian elevators. Other CCC-owned grain is included in the estimates by positions.

<sup>4/</sup>Mills reporting to the Bureau of the Census on millings and stocks of flour.

 $<sup>\</sup>frac{5}{\text{All}}$  off-farm storages not otherwise designated for each grain.  $\frac{6}{\text{Not}}$  available for July 1.

Wheat stocks in all positions are the largest of record. The carryover of corn is relatively large, but the sorghum grain carryover is relatively small. Oats stocks are below average and barley stocks among the smallest of record for October 1. The tonnage of the 4 feed grains represented in these stocks is a fifth larger than a year ago, but smaller than on October 1 of 1949, 1950 and 1951. These totals are presented by the Bureau of Agricultural Economics in a report which brings together stocks at terminals reported to the Grain Branch of the Production Marketing Administration; grains reported by Commodity Credit Corporation as owned and stored in bins or other storages under control of CCC and in transit; estimates of the Crop Reporting Board of stocks on farms, at merchant mills and at interior mills, elevators and warehouses.

Stocks of 1,539 million bushels of wheat stored in all positions on October 1 are the largest for that date in the comparable series beginning in 1935. This total is 12 percent larger than the previous record holdings of October 1, 1942 and 14 percent larger than the October 1, 1952 stocks. The stocks total exceeds 1953 production by 32 percent, reflecting the large carry-over of old wheat on July 1. Holdings on October 1, 1953 exceed those of a year earlier by 194 million bushels.

Off-farm wheat stocks of 977 million bushels are the largest of record for October 1, while the on-farm stocks of 562 million bushels are the third largest of record. Compared with a year earlier, farm stocks of wheat are 10 percent larger and the off-farm total 17 percent larger.

The record large off-farm total, includes 359 million bushels at terminals and 458 million bushels in interior mills, elevators and warehouses; each is the largest of record for the date in that position. Wheat held in merchant mills on October 1 totaled 134 million bushels, 10 percent below holdings a year earlier, but near average for the date. The Commodity Credit Corporation had 25,7 million bushels of wheat stored in bins under CCC control and in transit to ports — the largest quantity thus held since October 1, 1943, Other Government-owned wheat is included in the estimates by positions.

Rye stocks of 20.3 million bushels stored in all positions on October 1, 1953 are 56 percent larger than the 13.0 million bushels held a year ago, but near the average October 1 holdings of the last 8 years. Of the October 1 rye stocks, 10.2 million bushels or half of the total were held on farms. Stocks of rye at terminals totaled 6.2 million bushels on October 1, while stocks in all other off-farm storages amounted to 3.8 million bushels.

Carryover stocks of old corn in all positions on October 1; 1953; are estimated at nearly 764 million bushels. This carryover was exceeded only in 1949 and 1950 and is 57 percent larger than in 1952. Of the current stocks, 334 million bushels remained on farms, including some under Government loan. The quantity owned by Commodity Credit Corporation and stored in their own bins or in transit to those storages is estimated at 375 million bushels, which would be the largest of record in this position. Other CCC-owned corn is included in that reported for other positions. Over 9 million bushels of old corn was stored in terminals and more than 45 million at interior mills, elevators and warehouses; in each of these positions current corn stocks were the smallest for October 1 in the last 4 years. From the estimated supply of 3,488 million bushels on October 1, 1952, disappearance is thus indicated for the 1952-53 feeding season at about 2,725 million

1/Includes		avoid di	scrosing i	ndividual	operation	ıs.				

1/Includes stocks at Interior Mills, Elevators and Warehouses, commercial stocks reported by Grain Branch, P.M.A., at terminals, and those owned by Commodity Credit Corporation which are in transit to ports, in bins and other storages under C.C.C. controi.

<sup>2/</sup>Off-farm total plus farm stocks.

bushels. This is considerably less than in any of the preceding 3 seasons, reflecting both the excellent quality of the 1952 crop and smaller numbers of hogs fed.

Oats stocks of 1,064 million bushels in all positions October 1 are smallest for the date since 1947. They are, however, only 4 percent smaller than a year earlier, and 6 percent below the October 1 average. Of this total, about 87 million bushels were in off-farm positions, which is more than in most years, although less than on October 1, 1952. Barley stocks of 232 million bushels—nearly as much as was produced in 1953—are nevertheless the smallest for the date, except for 1952, in the 11 years of record. Off-farm stocks of 87 million bushels are less than on October 1 in any of the last 5 years.

The sorghum grain carryover of 7.3 million bushels is smallest for the date, except in 1947 and 1948, in the 7-year series, reflecting the small 1952 crop. In 1950, the carryover was nearly 60 million bushels. Of the current stocks of old sorghum grain, over 3.4 million bushels remained on farms, nearly 2.7 million were in interior mills and elevators, with only 1.2 million bushels in terminals. No identifiable new crop sorghum is included in these carryover stocks, data for which were prepared as a project under the Agricultural Marketing Act of 1946. (RMS, Title II).
